# Cultural Directions

---

Plant in good rich garden soil using vigoro or bonemeal as a fertilizer, being careful that the vigoro does not come in direct contact with the roots.

So as to disturb the soil at the roots as little as possible, plant the shrub with the burlap just as received to the depth marked by a string tied around the stem, remove this string and water freely. The burlap will soon decay as the shrub becomes established.

Prices in this list are net cash.
